Serum PSA (Total)

CLIA · Advia Centaur

TEST	RESULT	UNIT	REFERENCE RANGE
PSA (Total)	2.4	ng/mL	< 4.0

CLINICAL NOTES

• Serum PSA is organ-specific but not cancer-specific. Elevated PSA levels may be seen in benign prostatic hyperplasia (BPH), prostatitis, urinary tract infection, and following recent urological procedures.

• PSA results should be interpreted in conjunction with the patient's age, clinical findings, and digital rectal examination (DRE).

• Serial PSA measurements may provide additional clinical information. A single elevated PSA result is not diagnostic of prostate cancer.
