Serum Uric Acid

Uricase (enzymatic)

TEST	RESULT	UNIT	REFERENCE RANGE
Serum Uric Acid	7.8 ↑	mg/dL	2.6 - 7.0

CLINICAL NOTES

- Serum uric acid is interpreted with the clinical picture; hyperuricaemia is associated with gout and urate stones but is often asymptomatic.
- Levels are affected by diet (purine-rich foods, alcohol), diuretics, renal function and rapid cell turnover.
- A normal level during an acute gout attack does not exclude gout.
